EARLY U. S. GOLD COINS

1795 - 1839

A Brief History

In the Mint Act of April 2, 1792, which authorized the formation of the U. S. Mint, the various denominations which were to be struck were specified, and their weights, finenesses, and decimal relation to each other were spelled out in detail. The Dollar was the basic silver coin, the Cent the basic copper one, and the Eagle, or \$10 piece, was the basic gold denomination (with the lesser gold denominations specified as parts of the Eagle).

When gold coin production began at the Mint, however, Eagles were not the first denomination struck. Half Eagles were produced in 1795 between the end of July and the middle of September, and only then did production of the Eagles begin. In general, the mintage of Eagles from 1795 through 1804 was lower than that of Half Eagles (indeed, only in 1797 and 1799 did Eagle production surpass that of the lower denomination). At the end of 1804, due largely to the quantity of Eagles being shipped abroad for melting, production of the denomination was stopped for more than 30 years.

The Half Eagle was the first gold denomination struck at the U. S. Mint, beginning at the end of July, 1795. Of the three early gold denominations, this was by far the most popular and had much higher overall mintage totals than the other two. In addition, this denomination was not suspended for any lengthy period (unlike the Quarter Eagles and Eagles); in fact, only 1801, 1816, and 1817 are missing in an otherwise unbroken string of Half Eagles from 1795 to 1916. The early years – 1795 to 1834 – of this denomination, however, include more famous rarities than any other U. S. coinage series, largely due to melting abroad of vast numbers of the pieces when a shift in the international ratio of gold to silver made them worth more as bullion than their face value.

Though the Quarter Eagle would seem to us to have been a very useful denomination in business, it was not popular in the earlier years of its production. Mintages from 1796 to 1834 were extremely small (exceeding 6,000 pieces in only two years) and there is no date prior to the Classic Head design which can be considered less than rare. Again, the overvaluation of the gold content in relation to silver led to extensive melting of these early pieces, raising the rarity level of surviving specimens well above what one would expect.

EG1 1796 Breen 1. No Stars on obverse. First and only year of the type, mintage a mere 963 pieces (estimated 25-30 survive in all conditions). **Extremely Fine**. Smooth field with light adjustment marks, not uncommon for this date. Early die state with lower curl complete and a strong E in LIBERTY. Desirable and extremely rare.

19,500.00

EG2

EG2 1796 B.2. Stars on obverse. First year of issue with a mintage of only 432. It is estimated that only 15-20 survive in all grades. **Very Fine** with considerable lustre and evenly worn surfaces. Holed at one time at twelve o'clock but repaired by a skilled artisan.

3,250.00

EG3

EG3 1798 B.2. Widely spaced date with 5 berries on the reverse (R-7). The rarer of the two varieties, apparently struck in 1799, with a mintage of 480 pieces of the 5 berries variety (about half the mintage of the 1796 No Stars). Only about a dozen or so auction appearances. **Extremely Fine**, lustrous deep golden surfaces with pale coppery toning in the center and rich green gold borders. A rare and underrated date. Total mintage only 1,094.

6,750.00

EG4

EG4 1802/1 B.1 (R-5). This quarter eagle overdate must be seen under magnification. Deep frosted surfaces, a pleasing greenish gold and a better strike than usually seen. **Choice About Uncirculated**, almost full Mint State and nearly perfect but for a flat spot at four o'clock from the end of the planchet sheet. Ex Louis Eliasberg.

EG8

- EG8 1804 B.1 (R-5). 14 Stars on the reverse. **Extremely Fine** and a **choice** example. Deeply toned, coppery about the periphery. An excellent example for type. 6,250.00

EG10 1806/4 B.1 (High R-5). **About Uncirculated** with considerable mint lustre and frosty surfaces. Weakly struck (as are most) in the central portion, but other devices quite sharp. From a late state of the dies, with breaks by date and Liberty. Numerous surface marks and a circular cut by the cheek, but overall a desirable example for the date. Mintage only 1,155.

7,000.00

EG11

EG11 1806/4 B.1. **Choice Extremely Fine**. Frosty surfaces and again from a late die state. Not as well struck as the preceding example, however, virtually defect-free but for a minor edge dinge.

EG35

EG35 1806 B.1-B (R-7). Pointed 6. **About Uncirculated**, fully lustrous green gold surfaces. For the sake of accuracy, there is a scratch hidden in the lower curls, a pin point nick at star 4, and faint adjustment marks in the central portion of the reverse. 4,250.00

EG69

EG69 1838 B.1. **Choice Brilliant Uncirculated**. A borderline gem, with blazing mint lustre and truly superb toning. Sharply struck stars, hair curls, and feathers further enhance the overall appeal of this coin. As choice an example of the type as one could hope for.
